

The Breach Secure Platform provides continuous cyber security education to your employees, building them into strong defenders of your business

70% of all

Data Breaches Happen

# Because of an Untrained Employee

Threat Protector helps turn your weakest links into your strongest assets.

## INNOVATIVE CYBER-SECURITY SOLUTIONS

The Breach Secure Platform uses innovative cybersecurity training methods, dark web monitoring, phishing simulations, and yearly NIST security audits to build your employees from the weakest link to the strongest defense.

### CONTINUOUS EDUCATION

Weekly 2-minute microtraining video & short quiz combined with a monthly security newsletter keep cybersecurity short, engaging, and interactive.

### AUTO PHISHING

Unlimited and Automated. Routine simulated phishing has been proven to minimize the risk of end-users falling victim to a malicious phishing attempt.

### DARK WEB MONITORING

We proactively monitor the dark web for compromised account data. The sooner end-users are notified of a breach, the sooner they can change their passwords.

### YEARLY SECURITY AUDIT

We identify the human vulnerabilities and their related risks. Based on NIST standards, our Security Risk Assessment (SRA) is a yearly free audit of your organization.

### WRITTEN SECURITY POLICIES

Security policies and employee acknowledgement are key to establishing expectations and explaining repercussions to protect your organization.
